Product designer and computer science student creating mobile and web experiences. My work spans a nine-screen app redesign, a restaurant website concept, and a founder-led startup website redesign. Software engineering experience helps me connect interface decisions with implementation constraints.

## SELECTED DESIGN PROJECTS

### Dandy | Self-directed app redesign

Figma

• Redesigned nine screens of a handyman app, including the home screen, task list, booking flow, and an in-app AI assistant.

• Refined v1 into v1.1 after studio feedback: removed a competing search bar, strengthened the primary action, and retained the navy, cream, and pink brand palette.

### Clerkwell | Founder-led website redesign

• Redesigned the website for an immigration-attorney office service, shaping page structure, content hierarchy, visual direction, and interactions.

• Made the relationship between AI, a human office manager, and the attorney easier to follow; distinguished administrative support from the attorney’s decisions.

### Saanjh | Indian restaurant website concept

Web design

• Created visual direction, typography, imagery, and page compositions for a fictional Indian restaurant website.

• Paired cinematic photography with paths to explore the menu, restaurant story, and a phone-based booking enquiry.

## EXPERIENCE

### Software Engineering Intern — Neighbourhood Studios

Summer 2025

*Remix — a social styling app for building outfits and sharing them with friends.*

– Helped build and ship Remix, a social styling app, to TestFlight — working across design and development with AI-assisted tools.

– Redesigned several screens (including signup and login) that weren’t working well once the app was built, making them clearer and easier to use.

– Worked across design and building to get a real app into users’ hands.

## SKILLS & TOOLS

**Design:** UX research, UI design, visual hierarchy, information architecture, interaction design, prototyping, responsive web design, and iteration from feedback.

**Tools:** Figma, Framer, Blender. AI-assisted workflow: ChatGPT, Claude, Gemini.

**Technical background:** React Native, TypeScript, JavaScript, SQL, Supabase, Git.

## EDUCATION

### Georgia State University

Expected May 2028

B.S. in Computer Science, in progress

Relevant coursework: Data Structures & Algorithms, Discrete Mathematics, Probability & Statistics, Computer Science I & II
